Evening Brief

Date: Monday September 3, 2018

Weather Summary

Moisture will continue to increase across the southern portions of the Great Basin on Tuesday, with thunderstorm coverage increasing across the southern part of the Great Basin, and possibly moving northward toward the Idaho border by Wednesday and Thursday. Mostly wet lightning, but a mix of dry and wet on the northern periphery.

Winds may start to increase across the northern part of the area towards the end of this week ahead of another low pressure system forecast to impact the area. Due to current fire activity in these areas, **High Risk** has been issued.

Note... forecast models typically have a difficult time with the pattern changes this time of year, and therefore forecasts beyond the 3 day period may change significantly.

Preparedness Levels & Great Basin Fire Activity (from WFDSS)

Great Basin	4	Light Initial Attack Activity
National	4	GB New Fires and Acres: 25 fires 1004.6 acres; 421 acres large fire growth

Great Basin Fuel Status [interactive link](#) (Use Edge, Chrome or Firefox browsers)

Fuels and Fire Behavior advisory has been issued for [Northern Great Basin](#)

Fuels/Fire Potential

Fuel moisture that increased last week with a series of cold frontal passages over the northern half of the Great Basin have been recovering with ERCs back in the 70th-80th percentile in many areas of Idaho and the 80-90th+ percentile over northern Utah, and the northern half of Nevada. However, 1000-hr fuels are still well below normal in many of these areas and near record lows for the time of year in some locations. ERC's are below the 50th percentile across most of the southern half of Nevada, the southern 1/3 of Utah, into the AZ Strip.

Sagebrush Live Fuel Moisture levels across the northern half of the Great Basin are near or just below early September normals, and grasses are cured in all areas.

Drier and warmer air will move across much of the Great Basin this week. This will rapidly dry finer fuels across Nrn NV and NW UT into southern ID back to critical levels. Across ID/WY this will be a much more gradual process, due to the recent wetting rains, but even there, existing fires have burned actively in the past 24 hours.

Resources

Aviation within the Great Basin

- 1 VLAT's, 4 LATs, 2 CL-415's
- 21 SEATs, 2 Fire Bosses
- 11 Type 1 Helicopters / 11 Committed
- 13 Type 2 Helicopters / 9 Committed
- 20 Type 3 Helicopters

Crews Committed within the Great Basin

- 16 IHCs Committed / 1 Available
- 23 T-2 IAs Committed / 0 Available
